

# AK09916

# **3-axis Electronic Compass**

## 1. General Description

AK09916 is 3-axis electronic compass IC with high sensitive Hall sensor technology.

Small package of AK09916 incorporates magnetic sensors for detecting terrestrial magnetism in the X-axis, Y-axis, and Z-axis, a sensor driving circuit, signal amplifier chain, and an arithmetic circuit for processing the signal from each sensor. Self-test function is also incorporated. From its compact foot print and thin package feature, it is suitable for map heading up purpose in Smart phone to realize pedestrian navigation function.

#### 2. Features

- ☐ Functions:
  - 3-axis magnetometer device suitable for compass application
  - Built-in A to D Converter for magnetometer data out
  - 16-bit data out for each 3-axis magnetic component
    - > Sensitivity: 0.15 μT/LSB (typ.)
  - Serial interface
    - ➤ I<sup>2</sup>C bus interface

Standard and Fast modes compliant with Philips I<sup>2</sup>C specification Ver.2.1

- Operation mode
  - ➤ Power-down, Single measurement, Continuous measurement and Self-test
- DRDY function for measurement data ready
- Magnetic sensor overflow monitor function
- Built-in oscillator for internal clock source
- Power on Reset circuit
- Self-test function with internal magnetic source
- Built-in magnetic sensitivity adjustment circuit

| Operating temperatures:                       |  |
|---|--|
| •   | $-30^{\circ}$ C to $+85^{\circ}$ C                               |
| Operating supply voltage:                     |  |
| •   | +1.65V to +1.95V   |
| Current consumption:                          |  |

## 4. Block Diagram and Functions

| Block                      | Function  |
|----------------------------|---|
| 3-axis Hall sensor         | Monolithic Hall elements.   |
| MUX                        | Multiplexer for selecting Hall elements.  |
| Chopper SW                 | Performs chopping.  |
| HE-Drive                   | Magnetic sensor drive circuit for constant-current driving of sensor.   |
| Pre-AMP                    | Fixed-gain differential amplifier used to amplify the magnetic sensor signal.   |
| Integrator & ADC           | Integrates and amplifies Pre-AMP output and performs analog-to-digital conversion.  |
| OSC                        | Generates an operating clock for sensor measurement.  |
| POR                        | Power On Reset circuit. Generates reset signal on rising edge of VDD.   |
| VREF                       | Generates reference voltage and current.  |
| Interface Logic & Register | Exchanges data with an external CPU. I <sup>2</sup> C bus interface using two pins, namely, SCL and SDA. Standard and Fast modes are supported. |
| Timing Control             | Generates a timing signal required for internal operation from a clock generated by the OSC.  |
| Magnetic Source            | Generates magnetic field for Self-test of magnetic sensor.  |

## 5. Pin Configurations and Functions

| Pin No. | Pin name | I/O | Type  | Function  |
|---------|----------|-----|-------|---|
| A1      | VSS      | -   | -     | Ground pin.   |
| A3      | SCL      | I   | CMOS  | Control data clock input pin. Input: Schmidt trigger                      |
| B1      | VDD      | -   | Power | Positive power supply pin.  |
| B2      | TST      | I/O | CMOS  | Test pin. Connect to VSS or VDD or keep this pin non-connected.           |
| В3      | SDA      | I/O | CMOS  | Control data input/output pin. Input: Schmidt trigger, Output: Open-drain |

## 6. Absolute Maximum Ratings

### Vss = 0V

| Parameter                                   | Symbol | Min. | Max. | Unit |
|---|--------|------|------|------|
| Power supply voltage                        | Vdd    | -0.3 | +2.5 | V    |
| Input voltage (except for power supply pin) | VIN    | -0.3 | +2.5 | V    |
| Input current (except for power supply pin) | IIN    | -    | ±10  | mA   |
| Storage temperature                         | Tst    | -40  | +125 | °C   |

If the device is used in conditions exceeding these values, the device may be destroyed. Normal operations are not guaranteed in such exceeding conditions.

## 7. Recommended Operating Conditions

Vss = 0V

Downloaded from Arrow.com.

| Parameter             | Symbol | Min. | Typ. | Max. | Unit |
|-----------------------|--------|------|------|------|------|
| Operating temperature | Ta     | -30  |      | +85  | °C   |
| Power supply voltage  | Vdd    | 1.65 | 1.8  | 1.95 | V    |

### 8. Electrical Characteristics

The following conditions apply unless otherwise noted:

Vdd = 1.65V to 1.95V, Temperature range = -30°C to +85°C.

### 8.1. DC Characteristics

| Parameter                         | Symbol | Pin        | Condition                      | Min.   | Тур. | Max.    | Unit |
|-----------------------------------|--------|------------|--------------------------------|--------|------|---------|------|
| High level input voltage          | VIH    | SCL<br>SDA |                                | 70%Vdd |      |         | V    |
| Low level input voltage           | VIL    | SCL<br>SDA |                                | -0.3   |      | 30% Vdd | V    |
| Input current                     | IIN    | SCL<br>SDA | VIN = Vss or Vdd               | -10    |      | +10     | μΑ   |
| Hysteresis input voltage (Note 1) | VHS    | SCL<br>SDA |                                | 10%Vdd |      |         | V    |
| Low level output voltage (Note 2) | VOL    | SDA        | IOL ≤ +3mA                     |        |      | 20% Vdd | V    |
| Current consumption (Note 3)      | IDD1   | VDD        | Power-down mode<br>Vdd = 1.95V |        | 1    | 3       | μΑ   |
|                                   | IDD2   |            | When magnetic sensor is driven |        | 1.5  | 3       | mA   |
|                                   | IDD3   |            | Self-test mode                 |        | 2.5  | 4       | mA   |

- (Note 1) Schmitt trigger input (reference value for design)
- (Note 2) Output is Open-drain. Connect a pull-up resistor externally. Maximum capacitive load: 400pF (Capacitive load of each bus line for I<sup>2</sup>C bus interface).
- (Note 3) Without any resistance load. It does not include the current consumed by external loads (pull-down resister, etc.). SDA = SCL = Vdd or 0V.

Downloaded from Arrow.com.

#### 8.2. AC Characteristics

| Parameter                              | Symbol | Pin | Condition  | Min. | Тур. | Max. | Unit |
|--|--------|-----|--|------|------|------|------|
| Power supply rise time (Note 4)        | PSUP   | VDD | Period of time that VDD changes from 0.2V to Vdd.  |      |      | 50   | ms   |
| POR completion time (Note 4)           | PORT   |     | Period of time after PSUP to<br>Power-down mode (Note 5)   |      |      | 100  | μs   |
| Power supply turn off voltage (Note 4) | SDV    | VDD | Turn off voltage to enable POR to restart (Note 5)   |      |      | 0.2  | V    |
| Power supply turn on interval (Note 4) | PSINT  | VDD | Period of time that voltage lower<br>than SDV needed to be kept to<br>enable POR to restart (Note 5) | 100  |      |      | μs   |
| Wait time before mode setting          | Twait  |     |  | 100  |      |      | μs   |

(Note 4) Reference value for design.

(Note 5) When POR circuit detects the rise of VDD voltage, it resets internal circuits and initializes the registers. After reset, AK09916 transits to Power-down mode.

8.3. Analog Circuit Characteristics

| Parameter                                  | Symbol | Condition               | Min.   | Тур.  | Max.   | Unit   |
|--|--------|-------------------------|--------|-------|--------|--------|
| Measurement data output bit                | DBIT   |                         | -      | 16    | -      | bit    |
| Time for measurement                       | TSM    | Single measurement mode |        | 7.2   | 8.2    | ms     |
| Magnetic sensor sensitivity                | BSE    | $Ta = 25  ^{\circ}C$    | 0.1425 | 0.15  | 0.1575 | μT/LSB |
| Magnetic sensor measurement range (Note 6) | BRG    | $Ta = 25  ^{\circ}C$    | ±4670  | ±4912 | ±5160  | μΤ     |
| Magnetic sensor initial offset (Note 7)    |        | $Ta = 25  ^{\circ}C$    | -2000  |       | +2000  | LSB    |

(Note 6) Reference value for design

(Note 7) Value of measurement data register on shipment test without applying magnetic field on purpose.

## 8.4. I<sup>2</sup>C Bus Interface

 $I^2C$  bus interface is compliant with Standard mode and Fast mode. Standard/Fast mode is selected automatically by fSCL.

## ☐ Standard mode

 $fSCL \le 100kHz$ 

| Symbol  | Parameter                            | Min. | Тур. | Max. | Unit |
|---------|--------------------------------------|------|------|------|------|
| fSCL    | SCL clock frequency                  |      |      | 100  | kHz  |
| tHIGH   | SCL clock "High" time                | 4.0  |      |      | μs   |
| tLOW    | SCL clock "Low" time                 | 4.7  |      |      | μs   |
| tR      | SDA and SCL rise time                |      |      | 1.0  | μs   |
| tF      | SDA and SCL fall time                |      |      | 0.3  | μs   |
| tHD:STA | Start Condition hold time            | 4.0  |      |      | μs   |
| tSU:STA | Start Condition setup time           | 4.7  |      |      | μs   |
| tHD:DAT | SDA hold time (vs. SCL falling edge) | 0    |      |      | μs   |
| tSU:DAT | SDA setup time (vs. SCL rising edge) | 250  |      |      | ns   |
| tSU:STO | Stop Condition setup time            | 4.0  |      |      | μs   |
| tBUF    | Bus free time                        | 4.7  |      |      | μs   |

## ☐ Fast mode

 $100kHz \le fSCL \le 400kHz$ 

| Symbol  | Parameter                            | Min. | Тур. | Max. | Unit |
|---------|--------------------------------------|------|------|------|------|
| fSCL    | SCL clock frequency                  |      |      | 400  | kHz  |
| tHIGH   | SCL clock "High" time                | 0.6  |      |      | μs   |
| tLOW    | SCL clock "Low" time                 | 1.3  |      |      | μs   |
| tR      | SDA and SCL rise time                |      |      | 0.3  | μs   |
| tF      | SDA and SCL fall time                |      |      | 0.3  | μs   |
| tHD:STA | Start Condition hold time            | 0.6  |      |      | μs   |
| tSU:STA | Start Condition setup time           | 0.6  |      |      | μs   |
| tHD:DAT | SDA hold time (vs. SCL falling edge) | 0    |      |      | μs   |
| tSU:DAT | SDA setup time (vs. SCL rising edge) | 100  |      |      | ns   |
| tSU:STO | Stop Condition setup time            | 0.6  |      |      | μs   |
| tBUF    | Bus free time                        | 1.3  |      |      | μs   |
| tSP     | Noise suppression pulse width        |      |      | 50   | ns   |

## [I<sup>2</sup>C bus interface timing]

## 9. Function Descriptions

### 9.1. Power States

When VDD is turned on from Vdd = OFF (0V), all registers in AK09916 are initialized by POR circuit and AK09916 transits to Power-down mode.

Table 9.1. Power state

| State | VDD            | Power state                           |
|-------|----------------|---------------------------------------|
| 1     | OFF (0V)       | OFF                                   |
|       |                | It doesn't affect external interface. |
| 2     | 1.65V to 1.95V | ON                                    |

#### 9.2. Reset Functions

Power on Reset (POR) works until Vdd reaches to the operation effective voltage (about 1.1V: reference value for design) on power-on sequence. After POR is completed, all registers are initialized and AK09916 transits to Power-down mode.

When Vdd = 1.65 to 1.95V, POR circuit is active.

AK09916 has two types of reset;

- (1) Power on Reset (POR)
  - When Vdd rise is detected, POR circuit operates, and AK09916 is reset.
- (2) Soft reset

AK09916 is reset by setting SRST bit. When AK09916 is reset, all registers are initialized and AK09916 transits to Power-down mode.

#### 9.3. Operation Modes

AK09916 has following seven operation modes:

- (1) Power-down mode
- (2) Single measurement mode
- (3) Continuous measurement mode 1
- (4) Continuous measurement mode 2
- (5) Continuous measurement mode 3
- (6) Continuous measurement mode 4
- (7) Self-test mode

By setting CNTL2 register MODE[4:0] bits, the operation set for each mode is started. A transition from one mode to another is shown below.

Figure 9.1. Operation mode

When power is turned ON, AK09916 is in Power-down mode. When a specified value is set to MODE[4:0] bits, AK09916 transits to the specified mode and starts operation. When user wants to change operation mode, transit to Power-down mode first and then transit to other modes. After Power-down mode is set, at least 100 µs (Twait) is needed before setting another mode

#### 9.4. Description of Each Operation Mode

#### 9.4.1. Power-down Mode

Power to almost all internal circuits is turned off. All registers are accessible in Power-down mode. Data stored in read/write registers are remained. They can be reset by soft reset.

### 9.4.2. Single Measurement Mode

When Single measurement mode (MODE[4:0] bits = "00001") is set, magnetic sensor measurement is started. After magnetic sensor measurement and signal processing is finished, measurement magnetic data is stored to measurement data registers (HXL to HZH), then AK09916 transits to Power-down mode automatically. On transition to Power-down mode, MODE[4:0] bits turns to "00000". At the same time, DRDY bit in ST1 register turns to "1". This is called "Data Ready". When any of measurement data register (HXL to TMPS) or ST2 register is read, DRDY bit turns to "0". It remains "1" on transition from Power-down mode to another mode. (Figure 9.2.)

When sensor is measuring (Measurement period), measurement data registers (HXL to TMPS) keep the previous data. Therefore, it is possible to read out data even in measurement period. Data read out in measurement period are previous data. (Figure 9.3.)

Figure 9.2. Single measurement mode when data is read out of measurement period

Figure 9.3. Single measurement mode when data read started during measurement period

#### 9.4.3. Continuous Measurement Mode 1, 2, 3 and 4

When Continuous measurement mode 1 (MODE[4:0] bits = "00010"), 2 (MODE[4:0] bits = "00100"), 3 (MODE[4:0] bits = "00110") or 4 (MODE[4:0] bits = "01000") is set, magnetic sensor measurement is started periodically at 10 Hz, 20 Hz, 50 Hz or 100 Hz respectively. After magnetic sensor measurement and signal processing is finished, measurement magnetic data is stored to measurement data registers (HXL to HZH) and all circuits except for the minimum circuit required for counting cycle length are turned off (PD). When the next measurement timing comes, AK09916 wakes up automatically from PD and starts measurement again.

Continuous measurement mode ends when Power-down mode (MODE[4:0] bits = "00000") is set. It repeats measurement until Power-down mode is set.

When Continuous measurement mode 1 (MODE[4:0] bits = "00010"), 2 (MODE[4:0] bits = "00100"), 3 (MODE[4:0] bits = "00110") or 4 (MODE[4:0] bits = "01000") is set again while AK09916 is already in Continuous measurement mode, a new measurement starts. ST1, ST2 and measurement data registers (HXL to TMPS) will not be initialized by this.

Figure 9.4. Continuous measurement mode

#### 9.4.3.1. Data Ready

When measurement data is stored and ready to be read, DRDY bit in ST1 register turns to "1". This is called "Data Ready". When measurement is performed correctly, AK09916 becomes Data Ready on transition to PD after measurement.

#### 9.4.3.2. Normal Read Sequence

- (1) Check Data Ready or not by polling DRDY bit of ST1 register
  - DRDY: Shows Data Ready or not. Not when "0", Data Ready when "1".
  - DOR: Shows if any data has been skipped before the current data or not. There are no skipped data when "0", there are skipped data when "1".
- (2) Read measurement data
  - When any of measurement data register (HXL to TMPS) or ST2 register is read, AK09916 judges that data reading is started. When data reading is started, DRDY bit and DOR bit turns to "0".
- (3) Read ST2 register (required)
  - HOFL: Shows if magnetic sensor is overflowed or not. "0" means not overflowed, "1" means overflowed.

When ST2 register is read, AK09916 judges that data reading is finished. Stored measurement data is protected during data reading and data is not updated. By reading ST2 register, this protection is released. It is required to read ST2 register after data reading.

Figure 9.5. Normal read sequence

#### 9.4.3.3. Data Read Start during Measurement

When sensor is measuring (Measurement period), measurement data registers (HXL to TMPS) keep the previous data. Therefore, it is possible to read out data even in measurement period. If data is started to be read during measurement period, previous data is read.

Figure 9.6. Data read start during measurement

#### 9.4.3.4. Data Skip

Downloaded from Arrow.com.

When Nth data was not read before (N+1)th measurement ends, Data Ready remains until data is read. In this case, a set of measurement data is skipped so that DOR bit turns to "1".

When data reading started after Nth measurement ended and did not finish reading before (N+1)th measurement ended, Nth measurement data is protected to keep correct data. In this case, a set of measurement data is skipped and not stored so that DOR bit turns to "1".

In both case, DOR bit turns to "0" at the next start of data reading.

Figure 9.7. Data Skip: When data is not read

Figure 9.8. Data Skip: When data read has not been finished before the next measurement end

#### 9.4.3.5. End Operation

Set Power-down mode (MODE[4:0] bits = "00000") to end Continuous measurement mode.

#### 9.4.3.6. Magnetic Sensor Overflow

AK09916 has the limitation for measurement range that the sum of absolute values of each axis should be smaller than 4912  $\mu$ T. (Note 8)

$$|X|+|Y|+|Z| < 4912 \mu T$$

When the magnetic field exceeded this limitation, data stored at measurement data are not correct. This is called Magnetic Sensor Overflow.

When magnetic sensor overflow occurs, HOFL bit turns to "1".

When measurement data register (HXL to HZH) is updated, HOFL bit is updated.

(Note 8) BRG: 0.15µT/LSB

#### 9.4.4. Self-test Mode

Self-test mode is used to check if the magnetic sensor is working normally.

When Self-test mode (MODE[4:0] bits = "10000") is set, magnetic field is generated by the internal magnetic source and magnetic sensor is measured. Measurement data is stored to measurement data registers (HXL to HZH), then AK09916 transits to Power-down mode automatically.

Data read sequence and functions of read-only registers in Self-test mode is the same as Single measurement mode.

## 9.4.4.1. Self-test Sequence

- (1) Set Power-down mode. (MODE[4:0] bits = "00000")
- (2) Set Self-test mode. (MODE[4:0] bits = "10000")
- (3) Check Data Ready or not by polling DRDY bit of ST1 register. When Data Ready, proceed to the next step.
- (4) Read measurement data. (HXL to HZH)

## 9.4.4.2. Self-test Judgment

When measurement data read by the above sequence is in the range of following table, AK09916 is working normally.

|          | HX[15:0] bits   | HY[15:0] bits         | HZ[15:0] bits           |
|----------|-----------------|-----------------------|-------------------------|
| Criteria | -200 ≤ HX ≤ 200 | $-200 \le HY \le 200$ | $-1000 \le HZ \le -200$ |

#### 10. Serial Interface

#### 10.1. I<sup>2</sup>C Bus Interface

The  $I^2C$  bus interface of AK09916 supports the Standard mode (100 kHz max.) and the Fast mode (400 kHz max.).

#### 10.1.1. Data Transfer

To access AK09916 on the bus, generate a start condition first.

Next, transmit a one-byte slave address including a device address. At this time, AK09916 compares the slave address with its own address. If these addresses match, AK09916 generates an acknowledgement, and then executes READ or WRITE instruction. At the end of instruction execution, generate a stop condition.

#### 10.1.1.1. Change of Data

A change of data on the SDA line must be made during "Low" period of the clock on the SCL line. When the clock signal on the SCL line is "High", the state of the SDA line must be stable. (Data on the SDA line can be changed only when the clock signal on the SCL line is "Low".)

During the SCL line is "High", the state of data on the SDA line is changed only when a start condition or a stop condition is generated.

Figure 10.1. Data Change

#### 10.1.1.2. Start/Stop Condition

If the SDA line is driven to "Low" from "High" when the SCL line is "High", a start condition is generated. Every instruction starts with a start condition.

If the SDA line is driven to "High" from "Low" when the SCL line is "High", a stop condition is generated. Every instruction stops with a stop condition.

Figure 10.2. Start and Stop Condition

#### 10.1.1.3. Acknowledge

The IC that is transmitting data releases the SDA line (in the "High" state) after sending 1-byte data. The IC that receives the data drives the SDA line to "Low" on the next clock pulse. This operation is referred as acknowledge. With this operation, whether data has been transferred successfully can be checked. AK09916 generates an acknowledge after reception of a start condition and slave address.

When a WRITE instruction is executed, AK09916 generates an acknowledge after every byte is received. When a READ instruction is executed, AK09916 generates an acknowledge then transfers the data stored at the specified address. Next, AK09916 releases the SDA line then monitors the SDA line. If a master IC generates an acknowledge instead of a stop condition, AK09916 transmits the 8bit data stored at the next address. If no acknowledge is generated, AK09916 stops data transmission.

Figure 10.3. Generation of Acknowledge

#### 10.1.1.4. Slave Address

The slave address of AK09916 is 0Ch.

Figure 10.4. Slave Address

The first byte including a slave address is transmitted after a start condition, and an IC to be accessed is selected from the ICs on the bus according to the slave address.

When a slave address is transferred, the IC whose device address matches the transferred slave address generates an acknowledge then executes an instruction. The 8th bit (least significant bit) of the first byte is a R/W bit.

When the R/W bit is set to "1", READ instruction is executed. When the R/W bit is set to "0", WRITE instruction is executed.

#### 10.1.2. WRITE Instruction

When the R/W bit is set to "0", AK09916 performs write operation.

In write operation, AK09916 generates an acknowledge after receiving a start condition and the first byte (slave address) then receives the second byte. The second byte is used to specify the address of an internal control register and is based on the MSB-first configuration.

Figure 10.5. Register Address

After receiving the second byte (register address), AK09916 generates an acknowledge then receives the third byte.

The third and the following bytes represent control data. Control data consists of 8 bits and is based on the MSB-first configuration. AK09916 generates an acknowledge after every byte is received. Data transfer always stops with a stop condition generated by the master.

Figure 10.6. Control Data

AK09916 can write multiple bytes of data at a time.

After reception of the third byte (control data), AK09916 generates an acknowledge then receives the next data. If additional data is received instead of a stop condition after receiving one byte of data, the address counter inside the LSI chip is automatically incremented and the data is written at the next address. The address is incremented from 00h to 18h, from 30h to 32h. When the address is 00h to 18h, the address is incremented  $00h \rightarrow 01h \rightarrow 02h \rightarrow 03h \rightarrow 10h \rightarrow 11h \rightarrow ... \rightarrow 18h$ , and the address goes back to 00h after 18H. When the address is 30h to 32h, the address goes back to 30h after 32h. Actual data is written only to Read/Write registers (Table 11.2.).

Figure 10.7. WRITE Instruction

#### 10.1.3. READ Instruction

When the R/W bit is set to "1", AK09916 performs read operation.

If a master IC generates an acknowledge instead of a stop condition after AK09916 transfers the data at a specified address, the data at the next address can be read.

Address can be 00h to 18h, 30h to 32h. When the address is 00h to 18h, the address is incremented  $00h \rightarrow 01h \rightarrow 02h \rightarrow 03h \rightarrow 10h \rightarrow 11h \rightarrow ... \rightarrow 18h$ , and the address goes back to 00h after 18h. When the address is 30h to 32h, the address goes back to 30h after 32h. AK09916 supports current address read and random address read.

#### 10.1.3.1. Current Address READ

AK09916 has an address counter inside the LSI chip. In current address read operation, the data at an address specified by this counter is read.

The internal address counter holds the next address of the most recently accessed address.

For example, if the address most recently accessed (for READ instruction) is address "n", and a current address read operation is attempted, the data at address "n+1" is read.

In current address read operation, AK09916 generates an acknowledge after receiving a slave address for the READ instruction (R/W bit = "1"). Next, AK09916 transfers the data specified by the internal address counter starting with the next clock pulse, then increments the internal counter by one. If the master IC generates a stop condition instead of an acknowledge after AK09916 transmits one byte of data, the read operation stops.

Figure 10.8. Current Address READ

#### 10.1.3.2. Random Address READ

By random address read operation, data at an arbitrary address can be read.

The random address read operation requires to execute WRITE instruction as dummy before a slave address for the READ instruction (R/W bit = "1") is transmitted. In random read operation, a start condition is first generated then a slave address for the WRITE instruction (R/W bit = "0") and a read address are transmitted sequentially.

After AK09916 generates an acknowledge in response to this address transmission, a start condition and a slave address for the READ instruction (R/W bit = "1") are generated again. AK09916 generates an acknowledge in response to this slave address transmission. Next, AK09916 transfers the data at the specified address then increments the internal address counter by one. If the master IC generates a stop condition instead of an acknowledge after data is transferred, the read operation stops.

Figure 10.9. Random Address READ

## 11. Registers

### 11.1. Description of Registers

AK09916 has registers of 18 addresses as indicated in Table 11.1. Every address consists of 8 bits data. Data is transferred to or received from the external CPU via the serial interface described previously.

Table 11.1. Register Table

| Name  | Address | READ/<br>WRITE | Description               | Bit<br>width | Remarks          |
|-------|---------|----------------|---------------------------|--------------|------------------|
| WIA1  | 00h     | READ           | Company ID                | 8            |                  |
| WIA2  | 01h     | READ           | Device ID                 | 8            |                  |
| RSV1  | 02h     | READ           | Reserved 1                | 8            |                  |
| RSV2  | 03h     | READ           | Reserved 2                | 8            |                  |
| ST1   | 10h     | READ           | Status 1                  | 8            | Data status      |
| HXL   | 11h     | READ           | Measurement Magnetic Data | 8            | X-axis data      |
| HXH   | 12h     | READ           |                           | 8            |                  |
| HYL   | 13h     | READ           |                           | 8            | Y-axis data      |
| HYH   | 14h     | READ           |                           | 8            |                  |
| HZL   | 15h     | READ           |                           | 8            | Z-axis data      |
| HZH   | 16h     | READ           |                           | 8            |                  |
| TMPS  | 17h     | READ           | Dummy                     | 8            | Dummy            |
| ST2   | 18h     | READ           | Status 2                  | 8            | Data status      |
| CNTL1 | 30h     | READ/<br>WRITE | Dummy                     | 8            | Dummy            |
| CNTL2 | 31h     | READ/<br>WRITE | Control 2                 | 8            | Control settings |
| CNTL3 | 32h     | READ/<br>WRITE | Control 3                 | 8            | Control settings |
| TS1   | 33h     | READ/<br>WRITE | Test                      | 8            | DO NOT ACCESS    |
| TS2   | 34h     | READ/<br>WRITE | Test                      | 8            | DO NOT ACCESS    |

Addresses 00h to 18h, 30h to 32h are compliant with automatic increment function of serial interface respectively. In other modes, read data is not correct. When the address is in 00h to 18h, the address is incremented  $00h \rightarrow 01h \rightarrow 02h \rightarrow 03h \rightarrow 10h \rightarrow 11h \rightarrow ... \rightarrow 18h$ , and the address goes back to 00h after 18h. When the address is in 30h to 32h, the address goes back to 30h after 32h.

## 11.2. Register Map

Table 11.2. Register Map

| Addr. | Register name | <b>D7</b> | D6    | D5        | D4          | D3    | D2    | D1    | D0    |
|-------|---------------|-----------|-------|-----------|-------------|-------|-------|-------|-------|
|       | пинс          |           |       | Read-only | y register  | l     | l     | l     |       |
| 00h   | WIA1          | 0         | 1     | 0         | 0           | 1     | 0     | 0     | 0     |

### 11.3. Detailed Description of Register

#### 11.3.1. WIA: Who I Am

| Addr. | Register<br>name   | D7 | D6 | D5 | D4 | D3 | D2 | D1 | <b>D</b> 0 |  |  |
|-------|--------------------|----|----|----|----|----|----|----|------------|--|--|
|       | Read-only register |    |    |    |    |    |    |    |            |  |  |
| 00h   | WIA1               | 0  | 1  | 0  | 0  | 1  | 0  | 0  | 0          |  |  |
| 01h   | WIA2               | 0  | 0  | 0  | 0  | 1  | 0  | 0  | 1          |  |  |

WIA1[7:0] bits: Company ID of AKM. It is described in one byte and fixed value.

48h: fixed

WIA2[7:0] bits: Device ID of AK09916. It is described in one byte and fixed value.

09h: fixed

#### 11.3.2. RSV: Reserved

| Addr. | Register<br>name   | D7    | D6    | D5    | D4    | D3    | D2    | D1    | D0    |  |
|-------|--------------------|-------|-------|-------|-------|-------|-------|-------|-------|--|
|       | Read-only register |       |       |       |       |       |       |       |       |  |
| 02h   | RSV1               | RSV17 | RSV16 | RSV15 | RSV14 | RSV13 | RSV12 | RSV11 | RSV10 |  |
| 03h   | RSV2               | RSV27 | RSV26 | RSV25 | RSV24 | RSV23 | RSV22 | RSV21 | RSV20 |  |

RSV1[7:0] bits/ RSV2[7:0] bits: Reserved register for AKM.

#### 11.3.3. ST1: Status 1

| Addr.                     | Register<br>name   | D7 | D6 | D5 | D4 | D3 | D2 | D1   | <b>D</b> 0 |  |  |
|---------------------------|--------------------|----|----|----|----|----|----|------|------------|--|--|
|                           | Read-only register |    |    |    |    |    |    |      |            |  |  |
| 10h ST1 0 0 0 0 0 DOR DRD |                    |    |    |    |    |    |    | DRDY |            |  |  |
| Reset                     |                    | 0  | 0  | 0  | 0  | 0  | 0  | 0    | 0          |  |  |

DRDY: Data Ready

"0": Normal

"1": Data is ready

DRDY bit turns to "1" when data is ready in Single measurement mode, Continuous measurement mode 1, 2, 3, 4 or Self-test mode. It returns to "0" when any one of ST2 register or measurement data register (HXL to TMPS) is read.

DOR: Data Overrun

"0": Normal

"1": Data overrun

DOR bit turns to "1" when data has been skipped in Continuous measurement mode 1, 2, 3, 4. It returns to "0" when any one of ST2 register or measurement data register (HXL to TMPS) is read.

### 11.3.4. HXL to HZH: Measurement Magnetic data

| Addr. | Register<br>name | D7   | D6   | D5        | D4       | D3   | D2   | D1  | D0  |
|-------|------------------|------|------|-----------|----------|------|------|-----|-----|
|       |                  |      |      | Read-only | register |      |      |     |     |
| 11h   | HXL              | HX7  | HX6  | HX5       | HX4      | HX3  | HX2  | HX1 | HX0 |
| 12h   | HXH              | HX15 | HX14 | HX13      | HX12     | HX11 | HX10 | HX9 | HX8 |
| 13h   | HYL              | HY7  | HY6  | HY5       | HY4      | HY3  | HY2  | HY1 | HY0 |
| 14h   | HYH              | HY15 | HY14 | HY13      | HY12     | HY11 | HY10 | HY9 | HY8 |
| 15h   | HZL              | HZ7  | HZ6  | HZ5       | HZ4      | HZ3  | HZ2  | HZ1 | HZ0 |
| 16h   | HZH              | HZ15 | HZ14 | HZ13      | HZ12     | HZ11 | HZ10 | HZ9 | HZ8 |
|       | Reset            | 0    | 0    | 0         | 0        | 0    | 0    | 0   | 0   |

Measurement data of magnetic sensor X-axis/Y-axis/Z-axis

HXL[7:0] bits: X-axis measurement data lower 8-bit HXH[15:8] bits: X-axis measurement data higher 8-bit HYL[7:0] bits: Y-axis measurement data lower 8-bit HYH[15:8] bits: Y-axis measurement data higher 8-bit HZL[7:0] bits: Z-axis measurement data lower 8-bit HZH[15:8] bits: Z-axis measurement data higher 8-bit

Measurement data is stored in two's complement and Little Endian format. Measurement range of each axis is -32752 to 32752 in 16-bit output.

Table 11.3. Measurement magnetic data format

| Measurement da      | ta (each axis) [1: | 5:0] bits | Magnetic flux |
|---------------------|--------------------|-----------|---------------|
| Two's complement    | Hex                | Decimal   | density [μT]  |
| 0111 1111 1111 0000 | 7FF0               | 32752     | 4912(max.)    |
|                     |                    |           |               |
| 0000 0000 0000 0001 | 0001               | 1         | 0.15          |
| 0000 0000 0000 0000 | 0000               | 0         | 0             |
| 1111 1111 1111 1111 | FFFF               | -1        | -0.15         |
|                     |                    |           |               |
| 1000 0000 0001 0000 | 8010               | -32752    | -4912(min.)   |

### 11.3.5. TMPS: Dummy

| Addr. | Register<br>name       | D7 | D6 | D5 | D4 | D3 | D2 | D1 | <b>D</b> 0 |  |  |
|-------|------------------------|----|----|----|----|----|----|----|------------|--|--|
|       | Read-only register     |    |    |    |    |    |    |    |            |  |  |
| 17h   | 17h TMPS 0 0 0 0 0 0 0 |    |    |    |    |    |    |    | 0          |  |  |
|       | Reset                  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0          |  |  |

TMPS[7:0] bits: Dummy register.

#### 11.3.6. ST2: Status 2

| Addr. | Register name      | D7 | D6    | D5    | D4    | D3   | D2 | D1 | D0 |  |  |
|-------|--------------------|----|-------|-------|-------|------|----|----|----|--|--|
|       | Read-only register |    |       |       |       |      |    |    |    |  |  |
| 18h   | ST2                | 0  | RSV30 | RSV29 | RSV28 | HOFL | 0  | 0  | 0  |  |  |
| F     | Reset              | 0  | 0     | 0     | 0     | 0    | 0  | 0  | 0  |  |  |

ST2[6:4] bits: Reserved register for AKM.

HOFL: Magnetic sensor overflow

"0": Normal

"1": Magnetic sensor overflow occurred

In Single measurement mode, Continuous measurement mode 1, 2, 3, 4, and Self-test mode, magnetic sensor may overflow even though measurement data register is not saturated. In this case, measurement data is not correct and HOFL bit turns to "1". When measurement data register is updated, HOFL bit is updated. Refer to 9.4.3.6 for detailed information.

ST2 register has a role as data reading end register, also. When any of measurement data register (HXL to TMPS) is read in Continuous measurement mode 1, 2, 3, 4, it means data reading start and taken as data reading until ST2 register is read. Therefore, when any of measurement data is read, be sure to read ST2 register at the end.

### 11.3.7. CNTL1: Dummy

| Addr. | Register name       | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |  |  |
|-------|---------------------|----|----|----|----|----|----|----|----|--|--|
|       | Read/Write register |    |    |    |    |    |    |    |    |  |  |
| 30h   | CNTL1               | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  |  |  |
| F     | Reset               | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  |  |  |

CNTL1[7:0] bits: Dummy register.

#### 11.3.8. CNTL2: Control 2

| Addr. | Register name       | D7 | D6 | D5 | D4    | D3    | D2    | D1    | D0    |  |  |
|-------|---------------------|----|----|----|-------|-------|-------|-------|-------|--|--|
|       | Read/Write register |    |    |    |       |       |       |       |       |  |  |
| 31h   | CNTL2               | 0  | 0  | 0  | MODE4 | MODE3 | MODE2 | MODE1 | MODE0 |  |  |
| F     | Reset               | 0  | 0  | 0  | 0     | 0     | 0     | 0     | 0     |  |  |

MODE[4:0] bits: Operation mode setting

"00000": Power-down mode

"00001": Single measurement mode

"00010": Continuous measurement mode 1  $\,$ 

"00100": Continuous measurement mode 2

"00110": Continuous measurement mode 3

"01000": Continuous measurement mode 4

"10000": Self-test mode

Downloaded from Arrow.com.

Other code settings are prohibited

When each mode is set, AK09916 transits to the set mode. Refer to 9.3 for detailed information.

## 11.3.9. CNTL3: Control 3

| Addr.               | Register name | D7 | D6 | D5 | D4 | D3 | D2 | D1 | <b>D</b> 0 |
|---------------------|---------------|----|----|----|----|----|----|----|------------|
| Read/Write register |               |    |    |    |    |    |    |    |            |
| 32h                 | CNTL3         | 0  | 0  | 0  | 0  | 0  | 0  | 0  | SRST       |
| F                   | Reset         | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0          |

SRST: Soft reset "0": Normal

"1": Reset

When "1" is set, all registers are initialized. After reset, SRST bit turns to "0" automatically.

## 11.3.10. TS1, TS2: Test

| Addr.               | Register name | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |
|---------------------|---------------|----|----|----|----|----|----|----|----|
| Read/Write register |               |    |    |    |    |    |    |    |    |
| 33h                 | TS1           | -  | i  | i  | i  | i  | i  | 1  | -  |
| 34h                 | TS2           | -  | ı  | ı  | ı  | ı  | ı  | ı  | -  |
| R                   | leset         | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  |

TS1 and TS2 registers are AKM internal test register. Do not access these registers.

## 12. Example of Recommended External Connection

## 13. Package

## 13.1. Marking

Product name: 16

Date code:  $X_1X_2X_3X_4X_5$ 

- X1 = ID
- X2 = Year code
- X3 = Month code
- X4X5= Lot

## 13.3. Outline Dimensions

[mm]

### 13.4. Recommended Foot Print Pattern

[mm]

<Top view>

## 14. Relationship between the Magnetic Field and Output Code

The measurement data increases as the magnetic flux density increases in the arrow directions.

#### IMPORTANT NOTICE

Asahi Kasei Microdevices Corporation ("AKM") reserves the right to make changes to the information contained in this document without notice. When you consider any use or application of AKM product stipulated in this document ("Product"), please make inquiries the sales office of AKM or authorized distributors as to current status of the Products.
 All information included in this document are provided only to illustrate the operation and application

All information included in this document are provided only to illustrate the operation and application examples of AKM Products. AKM neither makes warranties or representations with respect to the accuracy or completeness of the information contained in this document nor grants any license to any intellectual property rights or any other rights of AKM or any third party with respect to the information in this document. You are fully responsible for use of such information contained in this document in your product design or applications. AKM ASSUMES NO LIABILITY FOR ANY LOSSES INCURRED BY YOU OR THIRD PARTIES ARISING FROM THE USE OF SUCH INFORMATION IN YOUR PRODUCT DESIGN OR APPLICATIONS.
 The Product is neither intended nor warranted for use in equipment or systems that require extraordinarily high levels of quality and/or reliability and/or a malfunction or failure of which may cause loss of human life, bodily injury, serious property damage or serious public impact, including but not limited to, equipment used in nuclear facilities, equipment used in the aerospace industry, medical equipment, equipment used for automobiles, trains, ships and other transportation, traffic signaling equipment, equipment used to control combustions or explosions, safety devices, elevators and escalators, devices related to electric power, and equipment used in finance-related fields. Do not use Product for the above use unless specifically agreed by AKM in writing.
 Though AKM works continually to improve the Product's quality and reliability, you are responsible for complying with safety standards and for providing adequate designs and safeguards for your hardware, software and systems which minimize risk and avoid situations in which a malfunction or failure of the Product could cause loss of human life, bodily injury or damage to property, including data loss or corruption.

4. Do not use or otherwise make available the Product or related technology or any information contained in this document for any military purposes, including without limitation, for the design, development, use, stockpiling or manufacturing of nuclear, chemical, or biological weapons or missile technology products (mass destruction weapons). When exporting the Products or related technology or any information contained in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. The Products and related technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
5. Please contact AKM sales representative for details as to environmental matters such as the RoHS compatibility of the Product. Please use the Product in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. AKM assumes no liability for damages or losses occurring as a result of noncompliance with applicable laws and regulations.
6. Resale of the Product with provisions different from the statement and/or technical features set forth in this document shall immediately void any warranty granted by AKM for the Product and shall not create or extend in any manner whatsoever, any liability of AKM.
7. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of AKM.
